Timber Innovations

Timber innovations Ltd was established in 2011 to design, sell and project manage timber frame houses, extensions and bespoke roofs using sustainable materials to builders and small scale developers.

The company has developed a product called the Rapod which was launched at Grand Designs in May 2014. Raopd is a modular high specification garden building that can operate as a home office.

With the help of the Green Bridge Fund, Timber Innovations have now opened a new manufacturing facility in Solihull which manufactures Rapod as well as other timber framed buildings.
